

Team Standards

Cardio Quest Team

Mentor: Morgan Nicholson

Project Sponsor: Dr. Jared Duval, Assistant Professor

Playful Health Technology Lab

Members:

Jesse Ceja

Tyler Jeffrey

Rique Yazzie

Anna Cheatham

2/12/2026

I. Overview

The purpose of this document is to outline the different rules and regulations of the team. It includes the roles of the individual members and how they will fill those roles, the meeting guidelines, and the tools we plan to use.

II. Team Members and Roles

These roles indicate who is primarily responsible for the coordination of their respective responsibilities, however, each team member is expected to contribute to all areas of the project including but not limited to: code development and review, documentation and deliverables, and architecture and design decisions.

Team Member 1	Responsibilities
 Name: Jesse Ceja Major: Computer Science Role: Github Manager	• Acts as the primary overseer of GitHub workflow. Ensures that all code is properly reviewed and merged. • Establishes and maintains the branching strategy.
Team Member 2	Responsibilities
 Name: Anna Cheatham Major: Software Engineering Role: Recorder	• Maintains detailed minutes for all weekly internal and mentor meetings. • Tracks versions of team deliverables and ensures that all files follow a consistent format. • Records all team decisions and votes to provide a clear history of the project's lifetime.
Team Member 3	Responsibilities
 Name: Tyler Jeffrey Major: Immersive Media & Games Role: Team Leader & Communicator	• Facilitates weekly agenda, ensuring meetings remain productive and tasks are covered. • Acts as the primary point of contact between Dr. Jared Duval, ensuring professional correspondence. • Monitors project timeline and GitHub to ensure progress of tasks and issue resolution.
Team Member 4	Responsibilities
 Name: Rique Yazzie Major: Computer Science Role: Website Developer	• Acts as the primary overseer of the website development, architecture, and core design. • Maintains and updates the project website with new documents and information.

III. Team Meeting Expectations

3.1 Meeting Times

- **Weekly Internal Meeting:** Thursdays, 6:00 PM - 8:00 PM.
- **Weekly Mentor Meeting:** Wednesdays, 10:30 AM - 11:00 AM.
- **Impromptu/Emergency Meetings:** Called via SMS/Discord; held via Zoom or Discord.

3.2 Agenda Structure

Internal meetings between members will generally follow this format. Minutes will be recorded by the designated member for meeting specific events. These meeting minute documents will be shared via Gmail at the start of each meeting ensuring each member has access, and be posted to the Capstone-Documents Github Repository for future reference.

1. **Status Update:** Brief report on task progress and current issues.
2. **Collaborative Work:** Dedicated block for tasks requiring real-time team input.
3. **Forward Planning:** Discussion of upcoming milestones/tasks and pending design decisions.

3.3 Decision-Making Process

Decisions will be finalized via anonymous $\frac{3}{4}$ majority vote. In the event of a persistent tie or deadlock, the Team Mentor will be consulted to provide a deciding vote.

3.4 Attendance & Conduct

- **Tardiness:** Late arrival to internal meetings is permitted without formal repercussion provided the member gives proper notice and delegated task deadlines are being met.
- **Absences:** All instances of member absence will be recorded in meeting minutes.

Treatment for the type of absence is as follows:

- **Excused:** Up to 10 instances are allowed before a formal report is filed.
- **Unexcused:** A maximum of 3 instances is permitted. Upon the 4th instance, the member will be reported to either the Team Mentor or Capstone Organizer based on group discretion.

An absence is considered excused if the member provides prior notice via Discord or SMS for reasons such as illness, emergencies, or mandatory events. It is ultimately up to team discretion to decide whether an absence is considered excused. Unexcused absences include any instance where no prior notice was given or no valid reason was provided.

- **Conduct:** Meetings will be led by the Team Leader to ensure the proper discussion and management of tasks. All feedback must be constructive and work-focused.

3.5 Conflict Resolution

- **Level 1:** A polite, verbal warning from the concerned party to the individual.
- **Level 2:** Discussion during internal team meetings, conflict will be recorded in the minutes.
- **Level 3:** Escalation to Team Mentor or Capstone Facilitator for external mediation based on team discretion.

IV. Tools & Document Standards

4.1 Version Control & Issue Tracking

- **GitHub:** Used for all source code and versioning.
 - **Branching Strategy:** No member shall work directly on the main branch. All new features, bug fixes, or documentation updates must be developed on a dedicated branch.
 - **Pull Requests (PRs):** Once a task is complete, a Pull Request must be opened. The Release Manager must review the code for errors and architectural consistency before merging it into main.
 - **Commit Standards:** Commits should be frequent, and should be accompanied with a 3-10 word title concisely describing the main update(s). They should further be accompanied by 10-30 words of description, listing each effect of the commit.
 - **Issue Tracking:** We will use GitHub Issues as our primary project management tool. Key tasks will be assigned an issue with a clear description and a designated "owner." Issues may have tags describing their task, either bug fixes, features, refactoring, etc.

4.2 Word Processing and Communication

- **Google Suite:** Google Docs, Sheets, and Slides will be used for all collaborative documentation.
- **Communication:** G-Mail for formal updates, Discord/SMS for daily coordination.

4.3 Composition and Review

For major deliverables, the team will divide work into specialized sections based on expertise.

- **Draft Deadline:** 48 hours before the final due date.
- **Final Review:** The designated Lead Editor for the deliverable will integrate all sections to ensure a "single-voice" flow and consistent formatting before submission.

V. Team Self-Review

The team will conduct a Monthly Self-Assessment during the final Thursday meeting of each month. These Self-Assessments will be organized by the Team Leader, ensuring each member has uninterrupted time to present.

5.1 Assessment Format

Each member will prepare a brief reflection (<5 minutes) covering these three topics:

- **Successes:** Key milestones achieved since the last review.
- **Challenges:** Specific areas where the members struggled. This can be
- **Action Plan:** A “Next Step” that the member will take to improve performance or overcome struggles for the next month.

5.2 Addressing Areas for Improvement

When an area for improvement is identified, the team will respond with any of the following methods:

- **Peer Support:** Team team will provide constructive feedback focused on steps for success rather than reasons for failure.
- **Resource Sharing:** In terms of technical improvements, the team can point towards specific documentation or provide demonstrations.
- **Scope Adjustment:** If the challenge is workload related, GitHub tasks and issues can be assessed and redistributed to prevent overwhelming any single member.
